PROFESSIONAL SUMMARY

B.Tech Computer Science graduate (2026) specializing in Machine Learning and Deep Learning. Built and deployed two end-to-end ML applications — an LSTM-based next-word prediction system and a content-based anime recommendation engine — using Python, TensorFlow, and Scikit-learn. Comfortable across the full pipeline: data cleaning, feature engineering, model training, and deployment via Streamlit. Looking to contribute as a Machine Learning Engineer.

TECHNICAL SKILLS

Languages	Python, SQL
Machine Learning	Scikit-learn, TF-IDF Vectorization, Cosine Similarity, Model Evaluation, Feature Engineering
Deep Learning	TensorFlow, Keras, LSTM, Neural Networks
Libraries	Pandas, NumPy, Matplotlib, Seaborn, NLTK
Concepts	Data Analysis, EDA, Statistics, Data Cleaning, Model Deployment
Tools	Jupyter Notebook, Google Colab, VS Code, Git, Streamlit

PROJECTS

LSTM Next Word Predictor — [Live Demo](#) — [GitHub](#)

- Built a deep learning web app for next-word prediction using TensorFlow, Keras, and LSTM, trained on a corpus of 10,000+ text sequences.
- Designed and trained the LSTM network over 100 epochs with the Adam optimizer and categorical cross-entropy loss; tuned sequence length and embedding dimensions to improve prediction quality.
- Serialized the trained model (.h5) and tokenizer (pickle) for fast, repeatable inference.
- Deployed as a live, interactive Streamlit app delivering real-time word predictions as the user types.

Anime Recommendation System — [GitHub](#)

- Built a content-based recommendation engine in Python and Scikit-learn over a dataset of 12,000+ anime records.
- Cleaned and preprocessed raw metadata (genres, synopses, ratings) and engineered features to improve recommendation relevance.
- Applied TF-IDF vectorization on textual features and cosine similarity to generate personalized, content-based recommendations.
- Conducted exploratory data analysis on genre distribution and user rating patterns to validate recommendation quality.

EDUCATION

B.Tech in Computer Science Engineering	2026
Babu Banarasi Das University, Lucknow	
Class XII (CBSE)	2021
Vidya Public School, Ghazipur — Score: 87%	

CERTIFICATIONS & TRAINING

Data Science & Artificial Intelligence Training — Grastech Pvt. Ltd.

Hands-on training in data preprocessing, exploratory data analysis, and ML workflows using Python, applied to real-world datasets with visualization in Matplotlib and Seaborn.
